

## TOP THREE REASONS

### Why People Buy Pinnacle Knowledge Management System

#### 1: Bottom Line - Save time and money

In reality, once a business owner is demonstrated how Pinnacle KMS can *automatically* (accurately) file documents as they arrive from mail, fax, email, or internally created into a secure digital cabinet, they come to realize they cannot pay a person \$5000 per year to sort, file, find, route, review, approve, secure, audit, report, give remote access to their business intelligence. No one person can afford to work for that pay!

#### 2: Never lose ANYTHING - Access to EVERYTHING - From ANYWHERE

Once a piece of business intelligence arrives in Pinnacle KMS *automatically*, it's there for the keeping. Pinnacle not only secures and tracks documents that normally would have been kept in an un-secure file cabinet, Pinnacle provides you access to all your confidential information from anywhere in the world – in seconds not minutes.

#### 3: Peace of Mind

What is the price tag for knowing as you leave your business daily that every document created internally or externally that pertains to the operation and success of recurring business revenue is inside your top pocket, briefcase or purse? There is no price for the peace of mind you get from knowing that in the event of a natural disaster, every piece of business intelligence your business owns (paper files and digital documents) is *automatically* backed up on a high-capacity portable hard drive that is stored offsite safely.
